Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

//dote="Organ: Stomach; Vector: pTZ18RP1; Site_1: EcoR1;
Site_2: Not1; The poly (A)+ RNA was decapped with tabacco acid pyrophosphatase (TAP) and ligated with DNA-RNA linker including EcoR1 site by treatment of T4 RNA ligase. The first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was circularized with E. coli DNA ligase after digestion of EcoR1 which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Toplof* by electroporation method. After analyzing and sequencing about 2,000 ~ 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(4T) 14 as 3' primer. The PCR products were used as template for transcription reaction when your verver including T2 promotor as 5' primer when your verver were constitution reaction when your verver including T3 promotor as 5' primer when your verver were constitution reaction when your verver constitution reaction when your verver constitution reaction when your verver transcription was a primer. The PCR products were used as template for transcription reaction when your verver constitution was a primer. The pCR products were used as template for transcription was such as a template for transcription was such as the purple was a primer constitution was such as the purple was a primer constitution was and purple was a purple was purple was a purple was purple was a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded CDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted CDNA libraries were constructed by transformation of the remaining DNA into competent cells B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTGGGCCTATGCGGCCCGAGCAGTTCAGTGATGAAGTGGAACCAGCAACAACACCTGAAGAAG

                                                                                                                                                                                                                                                                                                                                                                                                             germ cell tumors, and was then primed with a Not I -
oligo(dT) primer. Double-stranded cDNA was ligated to Eco
RI adaptors (Pharmacia), digested with Not I and cloned
into the Not I and Eco RI sites of the modified pT7T3
vector. Library is not normalized. Library was
constructed by Bento Soares and M. Patima Bonaldo. "

oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AW016546 418 bp mRNA linear EST 10-SEP-1999 UI-H-BIOD-abg-g-06-0-UI.81 NCI_CGAP_Sub2 Homo sapiens cDNA clone NCESE2711986 3', mRNA sequence.
